

# EWI Gas Meter Box

## RECOMMENDED MAINTENANCE

Every detail has been carefully considered in the manufacture and design of the EWI Gas Meter Box to ensure its durability and customer satisfaction.

Variable weather conditions can impact the durability over time. By following the simple guidelines below, you can help extend the lifespan of the meter box.

To maintain and preserve the box's powder-coated finish, regularly wipe it clean with mild soap and a damp cloth

To maintain the durability of the powder-coated finish, which is engineered to withstand outdoor elements, refrain from using any abrasive cleaning chemicals.

Please do not attempt to open the internal skin of the door leaf or frame. No maintenance or inspection is required for the insulation. The meter box has been designed to keep all its thermal lining securely in place, ensuring there are no cold spots.

The EWI meter box hinges and rear locks should be inspected annually and lubricated with WD-40 or a similar product.

In the event of damage, spare parts can be purchased from Panelcraft Ltd. Available items include gas vents, replacement doors, caribana, and cord.

You can easily order touch-up paint in white RAL9016 or any RAL color of your choice from Panelcraft Ltd. We provide a convenient service to ensure you receive the exact color you need.

\*No warranty if fitted within 10km, as the crow flies, of the coast.  
For coastal areas we recommend using grade 316 Stainless Steel - contact us for details.
